

Innovative WH&S Solutions for Industry

The Drover Tug-Mover has been developed over many years to offer rock solid reliability and consistent performance day in day out with a 1000kg pulling power. Clever, ultra-compact engineering allows the tug mover easy egress with heavy long loads in tight spaces. Enter small lifts with long loads confidently because of the compact design.

The Greatest possible traction is achieved via weight distribution. Our unique hitching mechanism engages the weight of the trolley over its own drive wheel, giving the utmost grip and adhesion to the ground. The result is smoother, safer, and easier operation in tight spaces under heavy loads.

The Automatic security break feature allows you to take your hand safely off the throttle control with the tug and trolley coming to an immediate stop and activating the park brake. The Tug- Mover is Ideal for commercial food operations, hospitals, industrial factories, and goods containers. All day battery life and 6 hour recharge means maximum productivity. Using the tug mover increases staff productivity and morale immediately while eliminating the risk of injury through physical exertion, strain and fatigue.

Features

- Simple controls.
- Long life Battery.
- Easy access charging socket.
- Flashing on/off switch when charging is required
- Down Hill Assist.
- Easily adjustable speed dial.
- Throttle lever for forward/reverse.
- Positive Drive wheel traction.
- Automatic security brake.
- Auto overload protection.
- Quiet operation
- Ultra compact design.
- Virtually Maintenance free.

design | partnership | manufacture

Benefits

- Dramatically less strain and fatigue.
- Prevents staff exertion and injury from heavy loads.
- Reduced Work Cover Claims.
- Higher employee morale.
- Higher productivity.
